Invention of the Internet

What is the Internet?

The internet is a series of networks connected by various computers and machines. Over the past few years, these connections have grown exponentially, allowing millions of devices to communicate through wired and wireless transmission

Beginning to the internet

The first general idea of communication via a network of computers dates back to J.C.R. Licklider in the 1950s, a professor of MIT, who believed that through computers, one would communicate information more efficiently than any other medium. The main problem was that most computers were quite large, expensive, and slow leaving many skeptical about the possible idea. However, in the 1950s, the Cold War between the U.S and the U.S.S.R had created a race for technical dominance. Thus, President Eisenhower created ARPPA to develop new spacefaring and computing technology. However, the space program

Browser Wars

What is a Browser?

A graphical user interface used to help a typical user of the internet explore the world wide web. A browser can display HTML Files which shows the text, pictures, music, and videos.

The Start of the Internet Browser

In 1993 the world wide web was new unexplored territory for many computer scientists and programmers alike with limitless possibilities. One of the first to pioneer and map out this territory would be Marc Andreessen, a co-founder of Netscape Navigator. Through his browser, he had a vision that anyone could access the world wide web at their leisure. At this time, the only people using the world wide web were experienced computer users and large businesses, and its design was not very user friendly. Through this new browser, a user could upload images and point and click onto various links to help traverse the

Internet Search Engines

What is a search engine?

Search engines are tools based on various websites that help users find and locate information and data on the Worldwide Web. Using multiple methods, a search engine could present the user with a list of some of the most popularly used sites within the search query.

The search for a Search engine

With the worldwide web continually gaining more websites with each passing week, it soon became somewhat troublesome for users of the internet to find the needed information. A person would look at a list after list of website names and hope for the one they needed. It all began at Stanford University, where two students, Jerry Yang and David Filo, wanted to collect information for their Stanford fantasy basketball league. They first came up with a directory for web users to categorize websites tighter based on similar subjects. They would later call this directory Yahoo, for it is a snappy and unique name. To generate a

The Dot Com Bubble

The Age of E-Commerce

In the late 1990s, in a small-town garage in Seattle, a man named Jeff Bezos realized one of the most popular selling items on the internet was books. In 1995 Bezos would launch Amazon to become the most extensive online bookstore. At the same time, another company was about to make its debut, eBay. Pierre Omidyar, eBay's founder, though at the time that an online auction site would be useful to many people. Omidyar believed that an online auction site would more fair then and level than other markets. Within months eBay was gaining hundreds of dollars through fees, and Amazon was quickly gaining more and
